

NICE Update – The Management of Urinary Tract Infections (UTIs) in Primary care Webinar

Overview

1 in 10 females each year present with a UTI and 70% of these are treated with antibiotics.

75% of patients treated for a UTI within hospital have a community-acquired infection.

How can pharmacy professionals support in educating their patients and help improve the use of antimicrobial medication in primary care?

This webinar will include an update on the latest guidance and practical ideas of how you might improve outcomes for your patients and support overall prudent prescribing in this area.

Designed for:

All pharmacy professionals who are patient facing and working in any sector of practice.

Speaker:

Avril Tucker

Advanced Primary Care Pharmacist specialising in antimicrobials
