

Type 2 Diabetes and Management of Complications Focal Point

Overview

In May 2017, NICE updated its guidelines on the management of Type 2 diabetes in adults (NG28). This guidance focuses on patient education, dietary advice, managing cardiovascular risk, managing blood glucose levels, and identifying and managing long-term complications.

This training event will explore some of these key areas of management, specifically considering the impact of the updates on diabetes management in practice and actions pharmacy professionals can take to advise patients to help minimise the extent of complications associated with this condition.
